

Philips Screeneo: the multi-purpose home cinema projector for the whole house

The ultra-connected, mobile Philips Screeneo home cinema projector with its designer curves quickly and easily transforms any wall in the house into a king-size cinema or television.

There is a match on the evening, and the TV screen just seems too small? The kids want to spend the afternoon watching a cartoon? It's a lovely summer's evening and you fancy turning the outside wall of your holiday home into a giant screen? You're tired of large, unsightly black screens on the wall, and all those cables cluttering up the middle of the living room? Then the Screeneo, marketed by Sagemcom under the Philips brand, is the ideal solution.

Images with a diagonal of up to 2.50 metres!

This revolutionary projector transforms any wall into a projection screen for multimedia content, the Internet or television channels alike. It doesn't need to be set very far back: even placed 10 cm from the projection surface, the Screeneo can produce an image of 127 cm, the equivalent of a 50" screen. And when it is set up 44 cm from the wall, the image can be increased to 254 cm – **a screen of 100"**!

The mobile home cinema ambiance

With its leather handle at the back, the Philips Screeneo is easy to carry from one room to another, depending on what each person wants. Thanks to the ultra-short throw technology combined with the latest LED, the image quality of the projector is spectacular, and the colour rendering is natural. In addition, the use of LED technology – a first for a projector of this type – guarantees a life of 30,000 hours, thus avoiding expenditure on replacement bulbs. In terms of sound, the Screeneo incorporates its own audio system (Dolby Digital 2.1) consisting of speakers and a subwoofer to provide a genuine home cinema ambiance, without needing other appliances to be connected. And to ensure an unforgettable evening with friends, Screeneo can also become a music station that broadcasts your favourite playlist directly from your smartphone or tablet via Bluetooth.

Ultra-connected and multi-purpose

Thanks to its integrated DVB-T tuner, all the family can watch their favourite TV channels on a big screen. Screeneo also has comprehensive connections – Bluetooth, Wi-Fi, DLNA, USB, HDMI and a SD card slot – enabling it to be linked up to any type of appliance: DVD and Blu-ray players, decoders, game consoles, USB sticks, etc. So everyone in the home will be happy.

Last but not least, Screeneo incorporates

Miracast: a wireless technology that enables you to project the content of your tablet or smartphone. Viewing your holiday photos and videos on a small screen is a thing of the past!

Philips Screeneo thus fits perfectly into any interior, making a clean sweep of cumbersome TV units and endless cables in the middle of the living room. The Philips Screeneo range has been acclaimed with an iF Product Design Award and is available in two colours: white and black, depending on specificities.
