

## Philips Screeneo: the multi-purpose mobile projector

*The ultra-connected, mobile Philips Screeneo with its designer curves quickly and easily turns any wall into a big screen, guaranteeing a successful presentation every time.*

The meeting room you thought you were going to use is already occupied, and the other rooms don't have a projection screen? You need to show a presentation but there isn't enough room to set up an appliance? Then the Screeneo, marketed by Sagemcom under the Philips brand, is the ideal solution

### Large-scale projections even with very little room

This revolutionary projector makes it possible to transform any wall into a projection screen for multimedia content, the Internet and TV channels alike. It doesn't need to be set very far back: even placed 10 cm from the projection surface, the Screeneo can produce an image of 127 cm, the equivalent of a 50" screen. And when it is set up at 44 cm from the wall, the image can be increased up to 254 cm – a screen of 100"!

## Spectacular images and an integrated sound system

With its leather handle at the back, the Philips Screeneo is easy to carry from one meeting room to another, according to each person's needs. Thanks to the ultra-short throw technology combined with the latest LED, the image quality of the projector is spectacular, and the colour rendering is natural. In addition, the use of LED technology – a first for a projector of this type – guarantees a life of 30,000 hours, thus avoiding expenditure on replacement bulbs. In terms of sound, the

Screeneo incorporates its own audio system (Dolby Digital 2.1), so there is no need to connect it to other external appliances. Try out the video: it'll give even more punch to your presentations!

It can also become a music station thanks to its integrated multimedia player via Bluetooth, and can broadcast directly from a smartphone, tablet or the Screeneo internal memory.

## Ultra-connected and multi-purpose

Equipped with Bluetooth, Wi-Fi, DLNA, USB, HDMI, VGA and an SD card slot, the Philips Screeneo can be connected to any type of appliance: laptops, DVD and Blu-ray players, decoders, game consoles, USB sticks, etc. So everyone will be

happy, at the office or in the home alike. As well as its Android operating system, the Screeneo incorporates Miracast: a wireless technology that enables you to project the content of your tablet, laptop or smartphone. No more messy wires and frantic searches for missing cables! With Screeneo, meetings and presentations run like clockwork, and will give your company a modern, dynamic image.

The Philips Screeneo range has been acclaimed with an iF Product Design Award and is available in two colours: white and black, depending on specificities.
