## **Sagemcom becomes the first to achieve prplWare 3.2 device certification**

Operators will now be able to benefit from increased choice and confidence in device behavior and application consistency with the world's first device certification on prplWare 3.2.

The Sagemcom Fast5598 Wi-Fi 7 Gateway delivers tri-band support, integrated prplMesh™ for whole-home coordination, and carrier-grade capabilities across hardware platforms. Designed to meet the demands of modern connected homes, the Fast5598 combines next-generation wireless performance with open source flexibility, giving operators a scalable gateway capable of mass deployment.

"We are proud to lead the industry by certifying the first device on prplWare 3.2," said Boris Nabadryk, Executive Vice President and Managing Director of Sagemcom Broadband Solutions BU. "As a member of the board of director and one of the top contributors within the prpl community, Sagemcom continues to innovate and support operators with flexible, standards-based platforms that empower rapid deployment and long-term interoperability."

With prplWare 3.2 device certification, the Fast5598 platform provides predictable and reliable performance to support unified applications, advancing the prpl Foundation's vision for platform-agnostic, hardware-independent, open source solutions. Operators can now scale deployments across diverse SoC platforms and accelerate time to market.

"We are excited to expand our trusted partnership with Sagemcom," added Leonard Dauphinee, President of the prpl Foundation. "This milestone shows our growing ecosystem includes all major SoC vendors and marks a major step toward industry adoption of open source middleware supporting interoperable broadband innovation."

The prplWare Certification Program, launched earlier this year, includes standardized testing implemented on QA Café's [CDRouter test platform](#) to validate that Certified prplWare devices meet open standards for security, remote management, and performance across multiple generations.

#### **About Sagemcom**

All over the world, thanks to the innovative solutions designed and built by its teams, Sagemcom provides, to the greatest number of people, access to broadband Internet, entertainment, and managed energy supply. As a “mission-driven company” since January 2022, Sagemcom makes sure that the design, construction and use of these solutions are sustainable, and fulfil the environmental and societal commitments known and shared by all its teams, partners and stakeholders. A technology leader in its markets, Sagemcom is 30% owned by its employees, and has achieved over €2.3 billion turnover in 2024.

#### **About the prpl Foundation**

The prpl Foundation is a collaborative open-source community dedicated to open APIs and open industry standards, focusing on carrier-grade software for broadband customer premise equipment as specified by operator members. The prpl Foundation brings together service providers, original equipment manufacturers, system integrators, chip vendors and application developers to harmonize home network architecture, then commonizes a reference implementation of standardized open-source infrastructure built atop open APIs and open industry standards. prpl enables a service delivery ecosystem including innovative third-party applications that can be quickly and easily deployed across different CPE platforms.
